## Affix worksheet pdf

Factors are numbers that are evenly divided into another number, and a prime factor is a factor that is a prime number. A factor tree is a tool that breaks down any number into its prime factors. Factor trees are useful tools for students because they provide a graphic representation of the prime factors that can split into a given number. Factor trees are so named because once created, they look somewhat like a tree. The worksheets below give students exercise in creating factor trees. For example, the free printable list of numbers like 28, 44, 99, or 76 and asks students to create a factor tree for each one. Some of the worksheets provide some of the first factors and ask students to fill out the rest; others require students to create factor trees from scratch. In each section, the worksheet is printed first with an identical worksheet below that lists the answers to make rating easier. D. Russell Finds out how many students know about creating factor trees by first completing their worksheet. This requires students to create each factor tree from scratch. Before students start this worksheet, explain that when the numbers are taken into account, there is often more than one way to do so. It won't matter what numbers they use because they'll always end up with the same prime factors of the number. For example, the first factors for 60 are 2, 3, and 5, as the sample problem demonstrates. D. Russell For this worksheet, students find the prime numbers for each number listed using a factor tree. If students struggle, this worksheet can help them master the concept. It presents some of the factors, and students fill in the rest provided empty spaces. In the first problem, for example, students are asked to find the factors of the number 99. The first factor, 3, was listed for them. The students then find the other factors, such as 33 (3 x 33), which factors further into the prime numbers 3 x 3 x 11. D. Russell This worksheet gives struggling students more help in mastering factor trees because some of the first factors are provided for them. For example, the number 64 factors in 2 x 34, but students can factor that number further into prime factors of 2 x 2 x 17, because the number can factor 34 in 2 x 17. D. Russell This worksheet provides some of the factors in helping students create factor trees. As students struggle, explain that the first number, 86, can only factor in 43 and 2 because both are those umeral prime numbers. In contrast, 99 may factor in 8 x 12, which can further factor in (2 x 4) x (2 x 6), which may have further factors in the prime factors (2 x 2 x 2) x (2 x 3 x 2). D. Russell Finish your factor tree lesson with this worksheet that also gives students some of the factors for each number. For further practice, students have completed these worksheets with which they can find the first factors of numbers without using factor trees. You can take many different medicines as well as numerous Drugs. It can be confusing to keep up with everything! This form can help. Because your medication regimen can change over time, make a copy of the empty form (PDF, 57K) so you always use a clean copy. Try bringing a completed and updated copy of this form to each doctor's appointment. Name of Drug What it is for date starts doctor color/form dosage and instructions This content is provided by the National Institute on Aging (NIA), part of the National Institutes of Health. Westend61/Getty Images Learn to plot coordinates on a roster, often starting in the fifth or sixth grades and rising in the level of difficulty level until high school and beyond. The grid contains an x and a y axle that really has two perpendi pageant lines. One trick to remember this (and yes, many students often forget what is what) is to think of y as the longer letter thus it will always be the vertical line on the axle. x is the horizontal line on the aching. However, if you have a different trick to remember the x and y axle, use what works for you. The point at which the x ace and the y-ace-crossing are referred to as the origin. You'll also see the grids referred to as the cartesian coordinates. Numbers for ploughing points are indicated as (3,4) or (2,2) etc. The first number means that you will start on the x-ale and move what is very much about, the second number is the number on the y ale. Therefore, for the ordered pair (3,5) I would go about 3 and up to five. There are actually four quadrants on the roster when 0 is the center of the grid. This allows for the ploughing of positive and negative integers. The negative integer will fall to the left side of the ale from where the two perpendiqe lines cross and they will also fall under the intersection of perpendimetent lines on the y ace. It's just a brief overview of how the cartesian grid, or plow lines on the coordinates work work work work. With a little exercise, you'll understand the concept in no time. There are seven worksheets with the answers on the second page of the PDF worksheet. D. Russell D. Russell D. Russell D. Russell D. Russell With a budget planner, you can breeze through account payments without breaking a sweat and gaining control of your finances knowing where your money is going and how much you need to cover your expenses. Budget helps you become more aware of your income and spending, so you can make sure you spend in a way that supports your financial goals instead of wondering where your money went at the end of the month. If you've never budgeted before — or you haven't done so for a while — follow this guide. Here's the most important to create your budget: Identify and calculate your fixed fixed Track spending on variable expenses. Build your savings. Eliminate debt. First, learn the details of how to make a monthly budget that fits within your net income, and then use this budget worksheet to start tracking your money. Fixed expenses When it comes to budgeting, there are two categories of expenses: fixed and variable. Fixed expenses do not change from month to month and are non-negotiable. This category includes the absolute necessities — such as housing, health insurance and transportation — and often consists of the bulk of your budget. Don't miss: Tricks to take the fear out of budget housing The most important part of your monthly budget is the money you spend on housing. Whether it's the cost of your rent or mortgage, housing is probably your biggest monthly expense. Research from the Bureau of Labor Statistics found that Americans spend an average of \$17,000 to \$18,000 on housing a year, which works out to between \$1,417 and \$1,500 monthly. If you own your home, you should also include the cost of your property taxes when budgeting for housing costs. Health insurance that stays healthy isn't free, so you have to include the cost of health care in your budget planner. Health care costs include your health insurance premiums if you're not covered by work — or if you top up your coverage using private market insurance — as well as costs for health care that's not covered by insurance and any money you spend on surpose and deductibles. How much you spend on health care depends on your age, whether you are taking prescription medications and the cost of your insurance premiums. On average, those ages spend 65 to 74 the most — \$5,956 annually, or more than \$496 monthly, according to the BLS. People ages 55 to 64 years old aren't far behind, spending an average of \$4,958 annually, which is about \$413 a month. Learn how to manage your money: The first thing you need to do with each paycheck carriage unless you're one of the lucky few who can bike or walk anywhere you need to go, budgeting for transportation is almost as essential as budgeting for housing. Depending on your living situation, transportation costs can include a monthly subway pass, car payment, fuel or vehicle leasing costs. When budgeting for transportation, keep in mind that some components of this category are considered fixed, such as car payments, while others vary, such as gas. Overall, transportation costs Americans an average of about \$9,000 each year, the equivalent of \$750 each month. Related: Selecting the Right Bank account for Your Variable Expenses As opposed to fixed expenses will change the variable components of your budget from month to month, depending on your lifestyle. Some variable expenses are absolutely necessary, such as while others count as discretionary spending, such as entertainment. Creating a budget will keep you from over paying over discretionary expenses so you have enough money for necessities. Food and Groceries No Spending is complete without a food cost category. Accounting for groceries is a pivotal part of the budget process, and it should also include takeout and restaurant visits. Don't forget about those food expenses that slip at you — like those slats you paid for in cash; they can work out to a substantial amount of spending over the course of a year. Gen Xers and early baby boomers spend the most on food on average, according to the BLS — likely because of larger household family sizes than millennials. People age 35 to 54 years spending more than \$8,000 annually on food, which works out to an average of \$667 monthly. Find out: Insider Grocery shopping hacks that will save you money utilities Though some utilities — such as your phone, internet and cable bill — have been fixed, much shifting from month to month depending on the season. Gas and electric bills, for example, will vary while crutching your air conditioner in summer or heater in winter. Other utility costs to consider include water and trash services. The BLS reports that utilities cost Americans an average of nearly \$4,000 a year or \$333 monthly. Entertainment and other extras living on a budget don't mean you may not enjoy yourself, so include entertainment expenses in your budget template so you can maintain balanced spending habits. The average American's entertainment expenses are about \$2,700 a year, which works out to \$225 a month. Your discretionary expenses may include movies, amusement parks, concerts or other activities for which you spend money, purely for enjoyment. Other expenses likely to work their way into your budget include personal care expenses, such as hair care and clothing. On average, clothing and personal care supplies cost \$2,430 a year, just north of \$200 per month. Although you may not be spending the same amount every month, set aside from a personal care allowance that you will have the funds you need when making a purchase. You should also make room in your budget for fitness, even if it's a discounted gym membership because staying healthy allows you to save money over time. Building savings and eliminating debt One of the biggest benefits of money management gets overall financial health because you plan your spending to align with your financial goals. With that in mind, saving for the future to become financially secure is key for any budget. In terms of retirement, start set goals and save as soon as possible. Online investment company Fidelity, for example, advises that you've saved 10 times your annual income by the time you hit retirement age — however, more than half of Americans will retire. The easiest way to put money away is to contribute to a 401k or individual retirement account. In your monthly budget, deduct money from your monthly income right away so you don't think twice about spending that cash instead. Consider automating your savings as part of your plan to build better money Finally, you should budget for debt reduction and ultimate debt elimination. The vast majority of Americans have a mortgage loan, student debt, credit card debt or all three. Just as you do for retirement saving, a percentage of your income sets aside once you get your paycheck to eliminate any debt you may have. The same strategy can help you create an emergency fund in addition to your retirement savings that will act as a safety net if you encounter illness, job loss or any other financial crisis.
